

Rajvee Kadchha

Frontend Developer / Engineer

Bangalore | rajveedkadchha@gmail.com | LinkedIn: [/rajveekadchha](#) | [+91 82389 34364](tel:+918238934364) | rajveekadchha.github.io

SUMMARY

Frontend engineer with 3+ years of experience building high-performance React and Next.js applications. Specialized in performance optimization, data-heavy interfaces, and scalable UI systems, with measurable impact on latency, PageSpeed, and user engagement.

SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React, Next.js, Redux, React Query

Styling: Tailwind, MUI, CSS, SCSS

Performance & Architecture: Code Splitting, Lazy Loading, Web Vitals (LCP, CLS, TBT), Component Architecture

Tools: Git, Webpack

Other: REST APIs, Design Systems, Shopify, Framer

EXPERIENCE

Frontend Developer

Feb 2024-Dec-2024 | Jan 2026 - Present

The Summer Design | Remote

- Built and shipped high-performance websites using **Framer and custom code**, focusing on **responsiveness**, accessibility, and cross-browser compatibility.
- Improved performance by optimizing image delivery (WebP, lazy loading, responsive sizing) and developed reusable component and layout systems to scale frontend development across projects.
- Collaborated with designers to translate Figma designs into production-ready, performant interfaces.

Software Developer

Jan 2025 - Jun 2025

Birbal AI | Remote

- Built a client-facing dashboard in React+TypeScript with MUI and dynamic network graphs using **JointJS**. Ensured scalability by **lazy-loading graph segments** and optimizing rendering, reducing graph update latency by **30%**. Built interactive graph components using JointJS and designed intuitive edit/delete flows for nodes and links, ensuring seamless UX and scalable state management.
- Enhanced an AI interview platform UI in React/TypeScript by implementing AWS S3 multipart uploads with presigned URLs: split large video files into parallel chunks with resume-on-failure support, reducing average chunk size by 80% and **lowering local memory usage by 80%**. Implemented a progress indicator (linear loader) during uploads and a retry mechanism for failed chunks; coordinated with backend to secure presigned endpoints and validate file size/type.
- Redesigned Next.js corporate website components and asset pipeline: added CTA buttons to improve engagement, code splitting, image optimization to WebP and enabled lazy loading. Improved Lighthouse/PageSpeed score from **60→80 (mobile)** and from **65→85 (desktop)**. Added monitoring via real-user metrics to validate performance gains.

Software Engineer

Jun 2021 - Nov 2023

Mrveda | Ahmedabad, IN

- Revamped Multi-Country Pricing(MCP) for Shopify 2.0, and **reduced setup time by nearly 80%** by eliminating theme dependencies.
- Developed and launched a feature-rich Note-taking app on Thinkific, boosted active session duration with advanced editing functionalities and an integrated PDF download feature.
- Enhanced page speed up to **80+ score** for Shopify stores by addressing performance metrics and utilizing technologies like LCP, CLS, TBT, image optimization, and other solutions.

EDUCATION

Ahmedabad University | BTech in Information and Communication Technology
